New IT control center of Generali Informatik sets standards

Generali Aachen. New IT control center from JST.

With the commissioning of the new IT control center in Aachen, Generali Informatik remains true to its motto of continuous improvement.

It is with great pride that all those involved in the project look at the new heart of the data center.
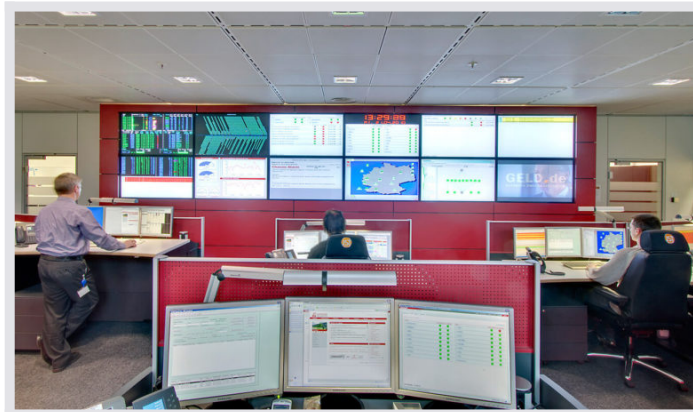

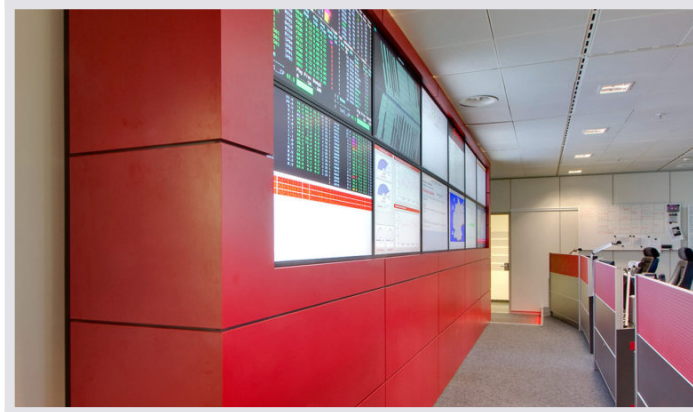

Thanks to technical and organisational improvements, the company is well prepared for the challenging tasks of the future. With modern technology and a new room and work concept Generali Informatik sets standards. It is not a matter of course to "operate out" of a Control Center while it is in operation and to guarantee 100% normal operation under restricted conditions. The temporary losses in the working environment were compensated with enormous commitment in order to realise the conversion project with the highest quality, within the planned budget and within the estimated time frame.

Thanks to technical and organisational optimisations, the company is well prepared for the challenges of the future. Generali Informatik sets standards with modern technology and a new room and work concept.

> **"I have come to appreciate the JST employees as reliable and competent partners from the planning phase to the project completion. This has also been confirmed to this day for the subsequent customer support.**
